- Reduces Chlorine
- Removes offensive Taste & Odor
- Reduces harmful Cysts (Crypto, Giardia)
- Removes Asbestos fibers
- 1/2 Micron Filtration (microscopic particulates down to 1/50,000 of an inch)
- Inhibits and controls Limescale
- Inhibits Slime Buildup
- No Channeling
- Does not secretly fail

Quick-change disposable cartridge is made of a special coated aluminum vessel that resists water pressure surges known to crack or split some plastic filter housings.

Exclusive Micro-Pure® filtering material coats entire pleated septum inside the cartridge, eliminating 99.9+% of all particles 1/2 micron and larger in size for the entire rated life of the cartridge. Chlorine is also reduced, along with off-tastes and offensive odors.

Two stage design incorporates KDF® media to control the formation of limescale and microbial bacteria — a major cause of slime buildup in vending tubing and machine components.
